

Graduate Aptitude Test in Engineering 2021 13th Feb S1

Candidate ID	CS21S58011340
Candidate Name	SHUBHAM TOMAR
Test Center Name	BBDIT A Block Duhai
Test Date	13/02/2021
Test Time	9:30 AM - 12:30 PM
Subject	CS-1 Computer Science & Information Technology

Section : **General Aptitude**

Q.1 The ratio of boys to girls in a class is 7 to 3.

Among the options below, an acceptable value for the total number of students in the class is:

- Options**
1. 21
 2. 73
 3. 50
 4. 37

Question Type : **MCQ**

Question ID : **823251521**

Status : **Answered**

Chosen Option : 1

Q.2

A circular sheet of paper is folded along the lines in the directions shown. The paper, after being punched in the final folded state as shown and unfolded in the reverse order of folding, will look like _____.

Options

Question Type : MCQ

Question ID : 823251524

Status : Answered

Chosen Option : 2

Q.3 Consider the following sentences:

- (i) Everybody in the class is prepared for the exam.
- (ii) Babu invited Danish to his home because he enjoys playing chess.

Which of the following is the CORRECT observation about the above two sentences?

- Options**
- 1. (i) is grammatically correct and (ii) is ambiguous
 - 2. (i) is grammatically correct and (ii) is unambiguous
 - 3. (i) is grammatically incorrect and (ii) is ambiguous
 - 4. (i) is grammatically incorrect and (ii) is unambiguous

Question Type : **MCQ**

Question ID : **823251523**

Status : **Answered**

Chosen Option : **2**

Q.4

Items	Cost (₹)	Profit %	Marked Price (₹)
P	5,400	---	5,860
Q	---	25	10,000

Details of prices of two items P and Q are presented in the above table. The ratio of cost of item P to cost of item Q is 3:4. Discount is calculated as the difference between the marked price and the selling price. The profit percentage is calculated as the ratio of the difference between selling price and cost, to the cost

$$(\text{Profit \%} = \frac{\text{Selling price} - \text{Cost}}{\text{Cost}} \times 100).$$

The discount on item Q, as a percentage of its marked price, is _____

Options

1. 5
2. 25
3. 10
4. 12.5

Question Type : **MCQ**Question ID : **823251527**Status : **Not Answered**

Chosen Option : --

Q.5 Given below are two statements 1 and 2, and two conclusions I and II.

Statement 1: All bacteria are microorganisms.

Statement 2: All pathogens are microorganisms.

Conclusion I: Some pathogens are bacteria.

Conclusion II: All pathogens are not bacteria.

Based on the above statements and conclusions, which one of the following options is logically CORRECT?

- Options**
1. Only conclusion II is correct
 2. Only conclusion I is correct
 3. Either conclusion I or II is correct.
 4. Neither conclusion I nor II is correct.

Question Type : **MCQ**

Question ID : **823251529**

Status : **Answered**

Chosen Option : **4**

Q.6 We have 2 rectangular sheets of paper, M and N, of dimensions 6 cm x 1 cm each.

Sheet M is rolled to form an open cylinder by bringing the short edges of the sheet together. Sheet N is cut into equal square patches and assembled to form the largest possible closed cube. Assuming the ends of the cylinder are closed, the ratio of the volume of the cylinder to that of the cube is _____

- Options**
1. 3π
 2. $\frac{3}{\pi}$
 3. $\frac{\pi}{2}$
 4. $\frac{9}{\pi}$

Question Type : **MCQ**

Question ID : **823251526**

Status : **Answered**

Chosen Option : **1**

Q.7 There are five bags each containing identical sets of ten distinct chocolates. One chocolate is picked from each bag.

The probability that at least two chocolates are identical is _____

- Options**
1. 0.8125
 2. 0.4235
 3. 0.6976
 4. 0.3024

Question Type : **MCQ**
Question ID : **823251528**
Status : **Answered**
Chosen Option : **1**

Q.8 Some people suggest anti-obesity measures (AOM) such as displaying calorie information in restaurant menus. Such measures sidestep addressing the core problems that cause obesity: poverty and income inequality.

Which one of the following statements summarizes the passage?

- Options**
1. The proposed AOM addresses the core problems that cause obesity.
 2. If obesity reduces, poverty will naturally reduce, since obesity causes poverty.
 3. AOM are addressing the core problems and are likely to succeed.
 4. AOM are addressing the problem superficially.

Question Type : **MCQ**
Question ID : **823251530**
Status : **Answered**
Chosen Option : **3**

Q.9 _____ is to *surgery* as *writer* is to _____

Which one of the following options maintains a similar logical relation in the above sentence?

Options

1. Doctor, book
2. Hospital, library
3. Plan, outline
4. Medicine, grammar

Question Type : **MCQ**

Question ID : **823251525**

Status : **Answered**

Chosen Option : **1**

Q.10 A polygon is convex if, for every pair of points, P and Q belonging to the polygon, the line segment PQ lies completely inside or on the polygon.

Which one of the following is NOT a convex polygon?

Options

1.

2.

3.

4.

Question Type : **MCQ**

Question ID : **823251522**

Status : **Answered**

Chosen Option : **1**

Q.1 Consider the following three functions.

$$f_1 = 10^n \quad f_2 = n^{\log n} \quad f_3 = n^{\sqrt{n}}$$

Which one of the following options arranges the functions in the increasing order of asymptotic growth rate?

Options

1. f_2, f_3, f_1
2. f_1, f_2, f_3
3. f_2, f_1, f_3
4. f_3, f_2, f_1

Question Type : **MCQ**

Question ID : **823251533**

Status : **Answered**

Chosen Option : **4**

Q.2 A relation **R** is said to be *circular* if aRb and bRc together imply cRa . Which of the following options is/are correct?

Options

1. If a relation **S** is circular and symmetric, then **S** is an equivalence relation.
2. If a relation **S** is transitive and circular, then **S** is an equivalence relation.
3. If a relation **S** is reflexive and circular, then **S** is an equivalence relation.
4. If a relation **S** is reflexive and symmetric, then **S** is an equivalence relation.

Question Type : **MSQ**

Question ID : **823251573**

Status : **Answered**

Chosen Option : **3,4**

Q.3 Three processes arrive at time zero with CPU bursts of 16, 20 and 10 milliseconds. If the scheduler has prior knowledge about the length of the CPU bursts, the minimum achievable average waiting time for these three processes in a non-preemptive scheduler (rounded to nearest integer) is _____ milliseconds.

Given **5**
Answer :

Question Type : **NAT**

Question ID : **823251555**

Status : **Answered**

Q.4

Consider the following statements.

- S_1 : The sequence of procedure calls corresponds to a preorder traversal of the activation tree.
- S_2 : The sequence of procedure returns corresponds to a postorder traversal of the activation tree.

Which one of the following options is correct?

Options

1. S_1 is false and S_2 is true
2. S_1 is true and S_2 is true
3. S_1 is false and S_2 is false
4. S_1 is true and S_2 is false

Question Type : **MCQ**Question ID : **823251534**Status : **Answered**Chosen Option : **1****Q.5**

Consider the following recurrence relation.

$$T(n) = \begin{cases} T(n/2) + T(2n/5) + 7n & \text{if } n > 0 \\ 1 & \text{if } n = 0 \end{cases}$$

Which one of the following options is correct?

Options

1. $T(n) = \Theta(n \log n)$
2. $T(n) = \Theta(n^{5/2})$
3. $T(n) = \Theta(n)$
4. $T(n) = \Theta((\log n)^{5/2})$

Question Type : **MCQ**Question ID : **823251560**Status : **Answered**Chosen Option : **1**

Q.6 Consider the following C code segment:

```
a = b + c;  
e = a + 1;  
d = b + c;  
f = d + 1;  
g = e + f;
```

In a compiler, this code segment is represented internally as a directed acyclic graph (DAG). The number of nodes in the DAG is _____.

Given 13

Answer :

Question Type : **NAT**

Question ID : **823251580**

Status : **Answered**

Q.7 An *articulation point* in a connected graph is a vertex such that removing the vertex and its incident edges disconnects the graph into two or more connected components.
Let T be a DFS tree obtained by doing DFS in a connected undirected graph G . Which of the following options is/are correct?

Options 1.

Root of T is an articulation point in G if and only if it has 2 or more children.

2. A leaf of T can be an articulation point in G .

3. Root of T can never be an articulation point in G .

4.

If u is an articulation point in G such that x is an ancestor of u in T and y is a descendent of u in T , then all paths from x to y in G must pass through u .

Question Type : **MSQ**

Question ID : **823251571**

Status : **Answered**

Chosen Option : **1,2,4**

Q.8 In the context of operating systems, which of the following statements is/are correct with respect to paging?

Options

1. Paging incurs memory overheads.

2. Paging helps solve the issue of external fragmentation.

3.

Multi-level paging is necessary to support pages of different sizes.

4. Page size has no impact on internal fragmentation.

Question Type : **MSQ**

Question ID : **823251541**

Status : **Answered**

Chosen Option : **1,2,3,4**

- Q.9** Let $r_i(z)$ and $w_i(z)$ denote read and write operations respectively on a data item z by a transaction T_i . Consider the following two schedules.

$$S_1 : r_1(x) \ r_1(y) \ r_2(x) \ r_2(y) \ w_2(y) \ w_1(x)$$

$$S_2 : r_1(x) \ r_2(x) \ r_2(y) \ w_2(y) \ r_1(y) \ w_1(x)$$

Which one of the following options is correct?

Options 1.

1. S_1 is conflict serializable, and S_2 is not conflict serializable.
2. Neither S_1 nor S_2 is conflict serializable.
3. Both S_1 and S_2 are conflict serializable.
4. S_1 is not conflict serializable, and S_2 is conflict serializable.

Question Type : **MCQ**

Question ID : **823251562**

Status : **Answered**

Chosen Option : **3**

- Q.10** A five-stage pipeline has stage delays of 150, 120, 150, 160 and 140 nanoseconds. The registers that are used between the pipeline stages have a delay of 5 nanoseconds each. The total time to execute 100 independent instructions on this pipeline, assuming there are no pipeline stalls, is _____ nanoseconds.

Given **600**

Answer :

Question Type : **NAT**

Question ID : **823251583**

Status : **Answered**

- Q.11** In an undirected connected planar graph G , there are eight vertices and five faces. The number of edges in G is _____.

Given **16**

Answer :

Question Type : **NAT**

Question ID : **823251546**

Status : **Answered**

Q.12

Consider the following representation of a number in IEEE 754 single-precision floating point format with a bias of 127.

$S : 1$ $E : 10000001$ $F : 111100000000000000000000$

Here S , E and F denote the sign, exponent and fraction components of the floating point representation.

The decimal value corresponding to the above representation (rounded to 2 decimal places) is _____.

Given **32**

Answer :

Question Type : **NAT**

Question ID : **823251554**

Status : **Answered**

Q.13

Consider the following ANSI C function:

```
int SimpleFunction(int Y[], int n, int x)
{
    int total = Y[0], loopIndex;
    for (loopIndex = 1; loopIndex <= n - 1; loopIndex++)
        total = x * total + Y[loopIndex];
    return total;
}
```

Let Z be an array of 10 elements with $Z[i]=1$, for all i such that $0 \leq i \leq 9$. The value returned by `SimpleFunction(Z, 10, 2)` is _____.

Given **1023**

Answer :

Question Type : **NAT**

Question ID : **823251578**

Status : **Answered**

Q.14

Consider the two statements.

$$S_1 : \quad \text{There exist random variables } X \text{ and } Y \text{ such that}$$

$$\left(\mathbb{E} \left[(X - \mathbb{E}(X)) (Y - \mathbb{E}(Y)) \right] \right)^2 > \text{Var}[X] \text{Var}[Y]$$

$$S_2 : \quad \text{For all random variables } X \text{ and } Y,$$

$$\text{Cov}[X, Y] = \mathbb{E} \left[|X - \mathbb{E}[X]| |Y - \mathbb{E}[Y]| \right]$$

Which one of the following choices is correct?

Options

1. S_1 is true, but S_2 is false.
2. Both S_1 and S_2 are true.
3. S_1 is false, but S_2 is true.
4. Both S_1 and S_2 are false.

Question Type : **MCQ**Question ID : **823251565**Status : **Not Answered**

Chosen Option : --

Q.15

The lifetime of a component of a certain type is a random variable whose probability density function is exponentially distributed with parameter 2. For a randomly picked component of this type, the probability that its lifetime exceeds the expected lifetime (rounded to 2 decimal places) is _____ .

Given **0.32**

Answer :

Question Type : **NAT**Question ID : **823251548**Status : **Answered**

Q.16 Consider the following grammar (that admits a series of declarations, followed by expressions) and the associated syntax directed translation (SDT) actions, given as pseudo-code:

$$\begin{aligned}
 P &\rightarrow D^* E^* \\
 D &\rightarrow \text{int ID} \{\text{record that ID.lexeme is of type int}\} \\
 D &\rightarrow \text{bool ID} \{\text{record that ID.lexeme is of type bool}\} \\
 E &\rightarrow E_1 + E_2 \{\text{check that } E_1.\text{type} = E_2.\text{type} = \text{int}; \text{ set } E.\text{type} := \text{int}\} \\
 E &\rightarrow !E_1 \{\text{check that } E_1.\text{type} = \text{bool}; \text{ set } E.\text{type} := \text{bool}\} \\
 E &\rightarrow \text{ID} \{\text{set } E.\text{type} := \text{int}\}
 \end{aligned}$$

With respect to the above grammar, which one of the following choices is correct?

Options

1. The actions will lead to an infinite loop.
2. The actions can be used to type-check syntactically correct integer variable declarations and integer expressions.
3. The actions can be used to type-check syntactically correct boolean variable declarations and boolean expressions.
4. The actions can be used to correctly type-check any syntactically correct program.

Question Type : **MCQ**

Question ID : **823251556**

Status : **Not Answered**

Chosen Option : --

Q.17 For a Turing machine M , $\langle M \rangle$ denotes an encoding of M . Consider the following two languages.

$$\begin{aligned}
 L_1 &= \{\langle M \rangle \mid M \text{ takes more than 2021 steps on all inputs}\} \\
 L_2 &= \{\langle M \rangle \mid M \text{ takes more than 2021 steps on some input}\}
 \end{aligned}$$

Which one of the following options is correct?

Options

1. Both L_1 and L_2 are undecidable.
2. Both L_1 and L_2 are decidable.
3. L_1 is undecidable and L_2 is decidable.
4. L_1 is decidable and L_2 is undecidable.

Question Type : **MCQ**

Question ID : **823251569**

Status : **Answered**

Chosen Option : **4**

Q.18

Consider the following language.

$$L = \{w \in \{0,1\}^* \mid w \text{ ends with the substring } 011\}$$

Which one of the following deterministic finite automata accepts L ?

Options

Question Type : MCQ

Question ID : 823251568

Chosen Option : 1

Q.19

A relation $r(A, B)$ in a relational database has 1200 tuples. The attribute A has integer values ranging from 6 to 20, and the attribute B has integer values ranging from 1 to 20. Assume that the attributes A and B are independently distributed.

The estimated number of tuples in the output of $\sigma_{(A>10) \vee (B=18)}(r)$ is _____.

Given 11

Answer :

Question Type : NAT

Question ID : 823251553

Status : Answered

Q.20 Suppose that L_1 is a regular language and L_2 is a context-free language. Which one of the following languages is NOT necessarily context-free?

Options

1. $L_1 \cap L_2$
2. $L_1 \cup L_2$
3. $L_1 \cdot L_2$
4. $L_1 - L_2$

Question Type : **MCQ**

Question ID : **823251531**

Status : **Answered**

Chosen Option : **1**

Q.21 A TCP server application is programmed to listen on port number P on host S . A TCP client is connected to the TCP server over the network. Consider that while the TCP connection was active, the server machine S crashed and rebooted. Assume that the client does not use the TCP keepalive timer. Which of the following behaviors is/are possible?

Options 1.

1. If the client was waiting to receive a packet, it may wait indefinitely.
2. The TCP server application on S can listen on P after reboot.
3. If the client sends a packet after the server reboot, it will receive a RST segment.
4. If the client sends a packet after the server reboot, it will receive a FIN segment.

Question Type : **MSQ**

Question ID : **823251574**

Status : **Answered**

Chosen Option : **1,2,3**

Q.22

Consider the following undirected graph with edge weights as shown:

The number of minimum-weight spanning trees of the graph is _____.

Given 128

Answer :

Question Type : NAT

Question ID : 823251547

Status : Answered

Q.23

Consider a linear list based directory implementation in a file system. Each directory is a list of nodes, where each node contains the file name along with the file metadata, such as the list of pointers to the data blocks. Consider a given directory `foo`.

Which of the following operations will necessarily require a full scan of `foo` for successful completion?

Options

1. Renaming of an existing file in `foo`
2. Deletion of an existing file from `foo`
3. Creation of a new file in `foo`
4. Opening of an existing file in `foo`

Question Type : MSQ

Question ID : 823251545

Status : Answered

Chosen Option : 1,2,4

Q.24

Consider the sliding window flow-control protocol operating between a sender and a receiver over a full-duplex error-free link. Assume the following:

- The time taken for processing the data frame by the receiver is negligible.
- The time taken for processing the acknowledgement frame by the sender is negligible.
- The sender has infinite number of frames available for transmission.
- The size of the data frame is 2,000 bits and the size of the acknowledgement frame is 10 bits.
- The link data rate in each direction is 1 Mbps ($= 10^6$ bits per second).
- One way propagation delay of the link is 100 milliseconds.

The minimum value of the sender's window size in terms of the number of frames, (rounded to the nearest integer) needed to achieve a link utilization of 50% is _____.

Given 14

Answer :

Question Type : **NAT**Question ID : **823251579**Status : **Answered****Q.25**

The following relation records the age of 500 employees of a company, where *empNo* (indicating the employee number) is the key:

$$empAge(\underline{empNo}, age)$$

Consider the following relational algebra expression:

$$\Pi_{empNo}(empAge \bowtie_{(age > age1)} \rho_{empNo1, age1}(empAge))$$

What does the above expression generate?

Options 1.

Employee numbers of only those employees whose age is more than the age of exactly one other employee.

2.

Employee numbers of all employees whose age is the minimum.

3.

Employee numbers of only those employees whose age is the maximum.

4.

Employee numbers of all employees whose age is not the minimum.

Question Type : **MCQ**Question ID : **823251557**Status : **Answered**Chosen Option : **1**

Q.26 A binary search tree T contains n distinct elements. What is the time complexity of picking an element in T that is smaller than the maximum element in T ?

Options

1. $\Theta(n \log n)$
2. $\Theta(1)$
3. $\Theta(n)$
4. $\Theta(\log n)$

Question Type : **MCQ**

Question ID : **823251540**

Status : **Answered**

Chosen Option : **4**

Q.27 Suppose a database system crashes again while recovering from a previous crash. Assume checkpointing is not done by the database either during the transactions or during recovery. Which of the following statements is/are correct?

Options

1. The system cannot recover any further.
2. The same undo and redo list will be used while recovering again.
3. The database will become inconsistent.
4. All the transactions that are already undone and redone will not be recovered again.

Question Type : **MSQ**

Question ID : **823251543**

Status : **Answered**

Chosen Option : **2,4**

- Q.28** Let $G = (V, E)$ be an undirected unweighted connected graph. The *diameter* of G is defined as:

$$\text{diam}(G) = \max_{u, v \in V} \{\text{the length of shortest path between } u \text{ and } v\}$$

Let M be the adjacency matrix of G .

Define graph G_2 on the same set of vertices with adjacency matrix N , where

$$N_{ij} = \begin{cases} 1 & \text{if } M_{ij} > 0 \text{ or } P_{ij} > 0, \text{ where } P = M^2 \\ 0 & \text{otherwise} \end{cases}$$

Which one of the following statements is true?

Options

1. $\text{diam}(G) < \text{diam}(G_2) \leq 2 \text{diam}(G)$
2. $\lceil \text{diam}(G)/2 \rceil < \text{diam}(G_2) < \text{diam}(G)$
3. $\text{diam}(G_2) \leq \lceil \text{diam}(G)/2 \rceil$
4. $\text{diam}(G_2) = \text{diam}(G)$

Q.36

Consider the following statements.

- S_1 : Every SLR(1) grammar is unambiguous but there are certain unambiguous grammars that are not SLR(1).
- S_2 : For any context-free grammar, there is a parser that takes at most $O(n^3)$ time to parse a string of length n .

Which one of the following options is correct?

Options

1. S_1 is true and S_2 is true
2. S_1 is true and S_2 is false
3. S_1 is false and S_2 is false
4. S_1 is false and S_2 is true

Question Type : **MCQ**Question ID : **823251535**Status : **Answered**Chosen Option : **1****Q.37**

Consider the following Boolean expression.

$$F = (X + Y + Z)(\overline{X} + Y)(\overline{Y} + Z)$$

Which of the following Boolean expressions is/are equivalent to \overline{F} (complement of F)?**Options**

1. $(X + \overline{Z})(\overline{Y} + \overline{Z})$
2. $(\overline{X} + \overline{Y} + \overline{Z})(X + \overline{Y})(Y + \overline{Z})$
3. $X\overline{Y} + Y\overline{Z} + \overline{X}Y\overline{Z}$
4. $X\overline{Y} + \overline{Z}$

Question Type : **MSQ**Question ID : **823251572**Status : **Answered**Chosen Option : **1,3,4**

- Q.38** Assume that a 12-bit Hamming codeword consisting of 8-bit data and 4 check bits is $d_8d_7d_6d_5c_8d_4d_3d_2c_4d_1c_2c_1$, where the data bits and the check bits are given in the following tables:

Data bits							
d_8	d_7	d_6	d_5	d_4	d_3	d_2	d_1
1	1	0	x	0	1	0	1

Check bits			
c_8	c_4	c_2	c_1
y	0	1	0

Which one of the following choices gives the correct values of x and y ?

- Options**
1. x is 0 and y is 0.
 2. x is 0 and y is 1.
 3. x is 1 and y is 1.
 4. x is 1 and y is 0.

Chosen Option : --

- Q.39** Consider the following instruction sequence where registers R1, R2 and R3 are general purpose and MEMORY[X] denotes the content at the memory location X.

Instruction	Semantics	Instruction Size (bytes)
MOV R1, (5000)	$R1 \leftarrow \text{MEMORY}[5000]$	4
MOV R2, (R3)	$R2 \leftarrow \text{MEMORY}[R3]$	4
ADD R2, R1	$R2 \leftarrow R1 + R2$	2
MOV (R3), R2	$\text{MEMORY}[R3] \leftarrow R2$	4
INC R3	$R3 \leftarrow R3 + 1$	2
DEC R1	$R1 \leftarrow R1 - 1$	2
BNZ 1004	Branch if not zero to the given absolute address	2
HALT	Stop	1

Assume that the content of the memory location 5000 is 10, and the content of the register R3 is 3000. The content of each of the memory locations from 3000 to 3010 is 50. The instruction sequence starts from the memory location 1000. All the numbers are in decimal format. Assume that the memory is byte addressable.

After the execution of the program, the content of memory location 3010 is _____.

Q.40

Consider the following ANSI C program.

```
#include <stdio.h>
int main()
{
    int i, j, count;
    count = 0;
    i = 0;
    for (j = -3; j <= 3; j++)
    {
        if ((j >= 0) && (i++))
            count = count + j;
    }
    count = count + i;
    printf("%d", count);
    return 0;
}
```

Which one of the following options is correct?

Options 1.

The program will compile successfully and output 8 when executed.

2. The program will not compile successfully.

3.

The program will compile successfully and output 10 when executed.

4.

The program will compile successfully and output 13 when executed.

Q.41

Consider the following array.

23	32	45	69	72	73	89	97
----	----	----	----	----	----	----	----

Which algorithm out of the following options uses the least number of comparisons (among the array elements) to sort the above array in ascending order?

Options

1. Insertion sort
2. Quicksort using the last element as pivot
3. Selection sort
4. Mergesort

Question Type : MCQ

Status : Answered

Chosen Option : 2

Q.42

Consider a *dynamic* hashing approach for 4-bit integer keys:

1. There is a main hash table of size 4.
2. The 2 least significant bits of a key is used to index into the main hash table.
3. Initially, the main hash table entries are empty.
4. Thereafter, when more keys are hashed into it, to resolve collisions, the set of all keys corresponding to a main hash table entry is organized as a binary tree that grows on demand.
5. First, the 3rd least significant bit is used to divide the keys into left and right subtrees.
6. To resolve more collisions, each node of the binary tree is further sub-divided into left and right subtrees based on the 4th least significant bit.
7. A split is done only if it is needed, i.e., only when there is a collision.

Consider the following state of the hash table.

Which of the following sequences of key insertions can cause the above state of the hash table (assume the keys are in decimal notation)?

Options

1. 5, 9, 4, 13, 10, 7
2. 10, 9, 6, 7, 5, 13
3. 9, 5, 10, 6, 7, 1
4. 9, 5, 13, 6, 10, 14

Chosen Option : 1

Q.43 Consider the following pseudocode, where *S* is a semaphore initialized to 5 in line#2 and *counter* is a shared variable initialized to 0 in line#1. Assume that the increment operation in line#7 is *not* atomic.

```
1. int counter = 0;
2. Semaphore S = init(5);
3. void parop(void)
4. {
5.     wait(S);
6.     wait(S);
7.     counter++;
8.     signal(S);
9.     signal(S);
10.}
```

If five threads execute the function *parop* concurrently, which of the following program behavior(s) is/are possible?

Options 1.

The value of *counter* is 5 after all the threads successfully complete the execution of *parop*.

2. There is a deadlock involving all the threads.

3.

The value of *counter* is 1 after all the threads successfully complete the execution of *parop*.

4.

The value of *counter* is 0 after all the threads successfully complete the execution of *parop*.

Q.45 Consider the following context-free grammar where the set of terminals is $\{a, b, c, d, f\}$.

$$\begin{aligned} S &\rightarrow daT \mid Rf \\ T &\rightarrow aS \mid baT \mid \epsilon \\ R &\rightarrow caTR \mid \epsilon \end{aligned}$$

The following is a partially-filled LL(1) parsing table.

	a	b	c	d	f	$\$$
S			①	$S \rightarrow daT$	②	
T	$T \rightarrow aS$	$T \rightarrow baT$	③		$T \rightarrow \epsilon$	④
R			$R \rightarrow caTR$		$R \rightarrow \epsilon$	

Which one of the following choices represents the correct combination for the numbered cells in the parsing table ("blank" denotes that the corresponding cell is empty)?

Options

- ① $S \rightarrow Rf$ ② blank ③ blank ④ $T \rightarrow \epsilon$
- ① $S \rightarrow Rf$ ② $S \rightarrow Rf$ ③ $T \rightarrow \epsilon$ ④ $T \rightarrow \epsilon$
- ① blank ② $S \rightarrow Rf$ ③ $T \rightarrow \epsilon$ ④ $T \rightarrow \epsilon$
- ① blank ② $S \rightarrow Rf$ ③ blank ④ blank

Q.48

Let p and q be two propositions. Consider the following two formulae in propositional logic.

$$S_1 : (\neg p \wedge (p \vee q)) \rightarrow q$$

$$S_2 : q \rightarrow (\neg p \wedge (p \vee q))$$

Which one of the following choices is correct?

Options

1. Neither S_1 nor S_2 is a tautology.
2. Both S_1 and S_2 are tautologies.
3. S_1 is a tautology but S_2 is not a tautology.
4. S_1 is not a tautology but S_2 is a tautology.

Chosen Option : **4**

Q.51 Consider two hosts P and Q connected through a router R . The maximum transfer unit (MTU) value of the link between P and R is 1500 bytes, and between R and Q is 820 bytes.

A TCP segment of size 1400 bytes was transferred from P to Q through R , with IP identification value as 0x1234. Assume that the IP header size is 20 bytes. Further, the packet is allowed to be fragmented, i.e., Don't Fragment (DF) flag in the IP header is *not* set by P .

Which of the following statements is/are correct?

Options

1. If the second fragment is lost, P is required to resend the whole TCP segment.
2. TCP destination port can be determined by analysing *only* the second fragment.
3. If the second fragment is lost, R will resend the fragment with the IP identification value 0x1234.
4. Two fragments are created at R and the IP datagram size carrying the second fragment is 620 bytes.

Q.55

Consider the relation $R(P, Q, S, T, X, Y, Z, W)$ with the following functional dependencies.

$$PQ \rightarrow X; P \rightarrow YX; Q \rightarrow Y; Y \rightarrow ZW$$

Consider the decomposition of the relation R into the constituent relations according to the following two decomposition schemes.

$$D_1 : R = [(P, Q, S, T); (P, T, X); (Q, Y); (Y, Z, W)]$$

$$D_2 : R = [(P, Q, S); (T, X); (Q, Y); (Y, Z, W)]$$

Which one of the following options is correct?

Options 1.

D_1 is a lossy decomposition, but D_2 is a lossless decomposition.

2. Both D_1 and D_2 are lossy decompositions.

3.

D_1 is a lossless decomposition, but D_2 is a lossy decomposition.

4. Both D_1 and D_2 are lossless decompositions.
